

Toilets are by far the main source of water use in the home—nearly 30 percent of residential indoor water consumption.

Toilets also happen to be a major source of wasted water due to leaks and/or inefficiency. If you're remodeling a bathroom or simply replacing an old, leaky toilet that is wasting money and water, consider a new, water-efficient WaterSense® toilet.

WaterSense® Toilets are certified by the U.S. Environmental Protection Agency to use a maximum of 1.28 gallons per flush while still providing reliable performance. These advanced high-efficiency toilets are 20 percent more efficient than the current 1.6 gallons per flush standard. They have been independently tested and proven to perform.

**Bellevue and Cascade Water Alliance now offer a \$100 rebate to homeowners for the replacement of old toilets with new WaterSense® Toilets (up to 3 rebates per residence).** There are currently over 300 toilet models with the WaterSense® label representing all major brands, styles and price ranges. Local retailers now carry many models with the WaterSense® label. When shopping for your new toilet, be sure to choose the toilets with the WaterSense® label.

Check Cascade Water Alliance's [website](#) for a WaterSense® Toilet Replacement Program rebate application form and list of eligible toilet models. You will also find information about what program participants are buying and saying about their toilets under "Summary of Customer Surveys." Call Bellevue Utilities at 425-452-4127 if you need assistance.

The WaterSense® label makes it easy to save water and protect the environment. Look for the WaterSense® label to choose quality, water-efficient products. Check out more [information](#) about the WaterSense® program and certified products.
